

Black Hills Reclamation Mix

A blend for reclamation of areas disturbed by grading, digging, slash piles, and disturbed top soils.

Characteristics:

- Easy to establish
- Diverse blend of grasses and clovers

Seeding Rate:

- 20 to 28 lbs broadcast
- 8 to 12 lbs drilled

Formulation

20% Kentucky Bluegrass

Sod-forming cool season perennial bunchgrass that can grow to 24" tall. Good hay or forage. Germinates in 14 to 21 days.

15% Timothy Climax

Relatively short-lived cool season perennial bunchgrass. Does best on rich moist soils. Highly palatable and nutritious. Grows to 40" and germinates in 7 to 10 days.

15% Canada Bluegrass VNS

A cool season, perennial sod-forming grass that grows to 24" tall. Similar to Kentucky Bluegrass but not related. Resistant to drought and high salinity. Germinates in 14 to 21 days.

15% Western Wheatgrass VNS

Long-lived native cool season sod-forming grass growing in clusters. Extensive, strong spreading rhizomes aids in the stabilization of disturbed soils. Germinates in 21 to 28 days and grows up to 36".

10% Slender Wheatgrass VNS

Cool season bunchgrass with germination in 21 to 28 days. A native species to mountain and intermountain areas of the Western US and Great Plains. It establishes quickly, thus is frequently used for reclamation.

10% Alsike Clover VNS

Short-lived, winter-hardy perennial that acts like a biennial. Adapted to poorly drained soils. Germinates in 7 to 10 days.

10% Annual Ryegrass

Short-lived annual bunchgrass relatively easy to establish and is usually used for a quick cover crop. Germinates in 4 to 7 days and grows to 36" tall.

5% Medium Red Clover

Perennial that typically lives 2 to 3 years. An aggressive establisher, produces most of it's growth in the spring. Germinates in 4 to 7 days.
