

Western Low Grow Mixture

A mix of natives that is all very short with minimum to no moisture requirements after establishment. Has annual ryegrass for a first year cover crop. Low growth reduces fuel load for fire control.

Characteristics:

- Grows up to 24" tall
- Requires little to no maintenance

New Seeding Rate:

- 35 to 40 lbs broadcast
- 15 to 20 lbs drilled

Formulation

35% Buffalograss

A low growing warm season sod-forming perennial that spreads by above ground stolons. Germinates in 14 to 21 days. Will not tolerate shade.

30% Sheep Fescue

Cool season bunchgrass that germinates in 14 to 21 days. Well adapted to most soil conditions and is great for erosion control and low maintenance mixtures. Grows 12 to 24" tall.

20% Side Oats Grama

A perennial, warm season bunch or sod-forming grass. Germinates in 14 to 21 days and grows to 24" or more. Is adapted to most soil conditions.

15% Annual Ryegrass

A short-lived annual bunchgrass relatively easy to establish and is usually used for a quick cover crop. Germinates in 4 to 7 days and grows 10 to 36" tall.
